OUR COMPANY

Trent Control Panels is a Stoke-on-Trent based designer of electrical control panels and manufacturer of bespoke control systems.

We have evolved over the years and as a member of the Trent Group of companies can offer our clients a complete solution package.

We provide:

- A full design and manufacturing service
- Modern control technology
- Full customer support during and after sales
- A wealth of HVAC controls and BMS experience within the company

OUR SERVICE

Whilst we specialise in the heating, ventilation, air conditioning and catering sectors, we have experience in process control equipment for engineering, pharmaceutical and healthcare.

With the latest CAD systems and customer focused workforce we can offer our clients a fast turn around not only on the design, but the actual manufacture and supply.

We offer a full customer testing facility to allow you to witness the panel testing procedure or for your own team to carry out any test or system simulations you may require.

We also have a standard range of off the shelf standard solution control panels for ventilation and AHU systems

SUPPORTING YOU

We offer a standard panel build specification for clients who do not have a project or panel build specification of their own. The components used within our standard panel build are of the highest quality and standard.

Our support services also extend to providing full and detailed wiring diagrams and component lists for clients who require a full design service.

As a member of the ECA all of our in-house procedures and panel assembly systems are assessed by an independent technical assessor to ensure that the services and build quality of our panels is maintained to the highest standards.

OUR TEAM

Within our team we have personnel who have spent most of their working careers within the HVAC controls industry, many having worked for the major control manufacturers.

This vast product and systems knowledge is invaluable when helping our clients meet the demands of today's energy efficiency standards and the ever increasing need for plant and equipment integration.
